PowerBroker Management Console

BeyondTrust empowers IT to eliminate the risk of intentional, accidental and indirect misuse of privileges on desktops and servers with globally proven solutions that increase security and compliance without impacting productivity.

BeyondTrust provides Privileged Access Lifecycle Management for granular privilege brokering and powerful central management so companies no longer have to choose between productivity or security and compliance.

Security, Compliance and Productivity with PBMC

On a day-to-day basis, security managers struggle to balance the time and resources necessary to achieve the ultimate goal to address, protect, and sustain their heterogeneous systems' security and regulatory compliance requirements at a pace which parallels the growth and complexity of the corporation itself. With continuous organizational change and transient staff becoming more the norm rather than the exception, effectively managing privileged access, the gateway to the most critical systems and resources in the organization, can be quite a challenge.

BeyondTrust's PowerBroker Management Console (PBMC) is the unifying platform central to providing enterprises with the ability to automate management of the privileged access lifecycle in heterogeneous IT environments. PBMC is a web-based application that will integrate all policies, roles, and log data from multiple hosts for BeyondTrust solutions, providing a central point for control, change management, and reporting on all connected products.

Key Benefits

— eWorkflow provides automated workflows for the provisioning and approvals for privileged access and I/O log reviews for true Segregation of Duties (SoD)

— Time-serialized log aggregation

— Automated log centralization for multi-server deployments

— Web-based (accessible from any location with an Internet connection)

— Architected for enterprise-class reliability and scalability, and incorporates a Role Based Access Control (RBAC) framework to support streamlined incident review and policy approval workflows

Regulatory Compliance

One aspect of regularoty compliance is centralization of consistent authentication. Centralization combined with the logging and auditing of users and systems needed to run consistently, will impress auditors trying to boost compliance efforts.

PBMC integrates with BeyondTrust solutions, providing automated workflows for privileged policy creation and approval, aggregation and review of event logs and audit data, automated policy propagation, and federation of policy change management workflows in large-scale deployments.

This integration helps customers to achieve robust security and compliance postures, while tremendously easing the manageability of large superuser privilege management deployments.

About BeyondTrust

BeyondTrust is a proven leader with more than 25 years of experience. More than half of the companies listed on the Dow Jones, eight of the 10 largest banks, seven of the 10 largest aerospace and defense firms, and six of the 10 largest U.S. pharmaceutical companies rely on BeyondTrust to secure their enterprise.

How PBMC Works

Simplify Administration with Certainty and Clarity

PBMC is a web-based application that will integrate all policies, roles, and log data from multiple hosts for all BeyondTrust products and complementary third party applications, providing a central point for control, change management, and reporting on all connected products.

PBMC provides automated workflows for privileged policy creation and approval, aggregation and review of event logs and audit data, automated policy propagation, and federation of policy change management workflows in large-scale deployments.

This integration helps customers to achieve robust security and compliance postures, while tremendously easing the manageability of large superuser privilege management deployments.
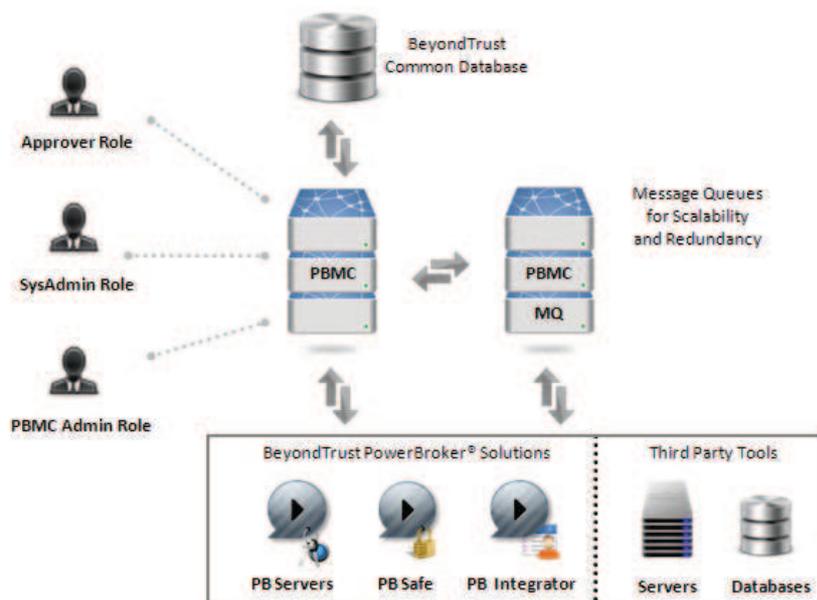

Eliminate Intentional, Accidental and Indirect Misuse of Privileges

PowerBroker Management Console provides an easy-to-use administrative console to centrally manage policy throughout distributed IT environments. PBMC empowers IT Managers to create, monitor and adjust policies instantly across a global network. PBMC is architected for enterprise-class reliability and scalability, and incorporates a Role Based Access Control (RBAC) framework to support streamlined incident review and policy approval workflows.

BeyondTrust PBMC Makes Privileged Identity Management Simple

Security

- Central management and automated review and approval workflows for heterogeneous systems and identities improve enterprise security and enhance regulatory compliance
- Uses HTTPS security, and a cryptographic protocol for transmitting all sensitive data
- Supports Role-based Access Control (RBAC) to support Segregation of Duties (SoD)

Compliance

- Automated workflow for event and I/O log reviews and approvals provides immediate and enhanced security and compliance awareness
- Time-serialized log aggregation across multiple installations unifies reports across the network and simplifies audit support requirements for compliance
- Automated policy propagation and audit trails reduces cost of managing deployments in large distributed environments

Productivity

- A graphical policy editor for PowerBroker users who have limited expertise (e.g. helpdesk professionals), to reduce administrative costs
- Automatic propagation of policy updates to multiple connected systems to reduce administrative overhead
- Interoperability significantly reduces time to deployment, costs, and all associated risks of deployment
